

[ PRODUCT SHEET: ASCOM d41 ]

Product: ASCOM d41

DECT telephone. GAP compatible. Tested on DCT1800S, DCT1800GAP, IP-DECT, MD110, MX-ONE, BusinessPhone and MD Evolution platforms.

## ASCOM d41 – LOGICAL, SMART AND AS FLEXIBLE AS YOUR WORKING DAY

- Superior features and quality operations
- Ideal for office, retail, school or college use
- High voice quality
- Intuitive user interface
- Logical, fast navigation and operation
- Centralised Management (Advanced version)
- Central phonebook (Advanced version)

### The handset you demanded is here

In modern office, education or retail environments, the requirement for fast, easy and clear communication is an integral part of operations. As a consequence, the demands made on communication systems can be many and complex. Using these demands as a starting point for development, we created the Ascom d41. A handset that is logical, smart and as flexible as your working day. And a communication solution that represents true value without compromises.

### Complexity has never been so simple

Pick up a d41 and the first characteristic you notice is the handset's streamlined design. Large, easily controlled keys including a smart 4-way navigation key, mean making and taking calls is easier and more logical. Browsing through the d41's features is also simple. A logically constructed menu displays calls received and dialled, shows contact telephone numbers and is intuitively programmed to allow for fast, logical operation.

### Easy communication is logical

The d41's telephone book has the capacity to store up to 750 numbers and the 25 most recent dialled, answered and missed calls. These are all displayed through easy to understand icons that also facilitate fast redialling. Time and date are preset and synchronised with the Internet (NTP) while an integrated loudspeaker delivers hands-free operation and conference calling if required. With a discreet vibrator as standard and the ability to support all standard PBX functions, this handset represents a logical and extremely capable solution for smarter internal communication.

Features	
Call list	Displaying the 25 last calls
Central phonebook	Access on the move to the corporate phone book (licensed)
Downloadable language	11 languages including cyrillic alphabet available + 1 customized
Dynamic output power	Reduces transmitting power depending on distance to base station
Headset	Standard connector (2.5 mm)
Keypad lock	Manual and automatic
Large illuminated display	The display is B/W and Grey
Local phonebook	Quick access to your favourite phone numbers. Stores 750 entries
Loudspeaker	Frees up your hands and allows you to have a conference call on the spot
Vibrator	A call can be discretely received. The vibrator also helps to alert the user in noisy environments

#### Accessories

- Leather case
- Swivel clip
- Security string
- Headset with microphone on cable
- Headset with microphone on boom

#### Chargers

- Basic Desktop charger
- Advanced desktop charger. Support for centralised management concept.
- Charging rack. Support for centralised management concept.

#### Basic or Advanced – let your demands decide

As you know, your workplace or nature of your business has a profound effect on how you want to steer internal communication. With this in mind, Ascom created the d41 in two different license dependent versions – Basic or Advanced. The d41 Basic is an ideal solution for users with less complex demands but who still require quality handsets that can be relied upon for intense daily use. In its Advanced form, the d41 features Centralised Management, Central Phonebook and the capacity to display short messages – features designed to enhance communication possibilities and reduce system maintenance and administration time.

#### Smoother upgrades and reduced downtime through Centralised Management (licensed)

Does your internal communication system truly reflect your need for flexibility and the capacity to react quickly without causing unnecessary interruptions? Many businesses told us that this was not the case, and as a result we developed a new Centralised Management concept that allows for smooth, trouble-free software upgrades and parameter synchronisations. The individual settings on each handset are stored centrally, negating the need to collect handsets for administration and upgrades. This solution also allows for handset overviews without disturbing the user or your operations. With an IP-DECT system, administration of end-user devices can be easily facilitated over the air (OTA). In a traditional DECT system, this takes place when the handset is in the charging station. Both systems offer administrators substantial benefits in terms of time management.

#### Keep everyone in the loop with the Central Phonebook

The advanced version of the d41 offers direct access to one common number database allowing everyone to utilise the same information. This feature also ensures that contact information is always fully up to date.
