	Supports both SIP and H.323

ASCOM i75® MESSENGER

A HIGH-TECH WIFI COMMUNICATION TOOL IN A SLIM YET ROBUST PACKAGE

The Ascom i75 Messenger personal messaging and IP telephony device is designed specifically for harsh environments and features an intuitive user interface with a large display and a four-way navigation button.

This portable, compact and multipurpose WiFi handset not only meets the demands of hotel, retail and industry, but it is also ideal for any office environment. The i75 Messenger combines advanced messaging and highly versatile telephony.

Unified Communications – “3 in 1”

Naturally, the Ascom i75 Messenger allows you to send and receive messages as you wish. Built to support Interactive Messaging, this handset is uniquely equipped to communicate with a comprehensive range of external sources, including building management systems, hospital systems and production process systems.

With the i75 Messenger in your hand, you’ve got a remote control to a specific machine, a door opener or, if you connect it to a work assignment database, on-the-spot instructions for you or your colleagues.

Virtual SIM. Unreal benefits

Lost your i75? No problem. Thanks to the Virtual SIM, you’ll be on call with another ‘system-associated’ handset in no time. All you need to do is carry out a simple procedure in order to transfer your own settings – volume, menu, local phonebook, alarm settings – from a central server. Furthermore, multiple charging options, including a desktop charger, charging rack and battery charging rack, keeps your handset going at all times. Perfect for saving time and maintaining productivity.

[PRODUCT SHEET: ASCOM i75 MESSENGER]

Features	
Virtual SIM	Identity and up to 10 profiles with personalised settings stored on a central server
Shared phone	Ideal for multiple users. Simple login procedure to receive personal settings

- Desktop charger
- Charging rack
- Battery charging rack
- Leather case
- Standard clip
- Swivel clip
- Headset with microphone on cable
- Headset with microphone on boom
- Headset with hearing protection
- Security string

Push-to-talk instant group communications

The push-to-talk functionality makes it possible to instantly connect a group to a conference session by a single key press. The group members are automatically contacted and connected which allows the complete group to respond quickly and efficiently in critical situations.

Presence Management for increased productivity

With the unique integration to presence management systems, you will never be left with unanswered calls, nor have calls redirected to voicemail, without giving the caller information of your availability.

Location – a solution for enhanced personal safety

The Ascom/Ekahau secure tracking solution offers the ability to locate things or people over any generation of Wifi networks.

The location possibilities enable location-based services such as finding closest assets as well as the ability to locate key personnel for workflow optimizations.
