Product: Ascom i75® Protector

Provides a superb combination of wireless telephony, alarm and messaging – safety is just a touch of a button away

ASCOM i75® PROTECTOR THE ULTIMATE VoWiFi COMMUNICATION TOOL

A benchmark in flexibility and rugged elegance, this compact, lightweight and grip-friendly VoWiFi handset not only meets the demands of healthcare and heavy industry, but it is also ideal for any office environment. The Ascom i75 truly is an adaptable handset. Shockproof and ESD protected, it is specially designed for harsh environments and rough handling.

Unique alarm functions

The Ascom i75 alleviates a variety of safety problems on the job. Equipped with different personal alarms, including man-down/no-movement, you can rest assured that help is always close at hand. An additional safety feature is the design of the alarm button. Thumb-sized and visible, it could mean the difference between rapid assistance and a life-threatening situation.

Professional Messaging

Naturally, the Ascom i75 allows you to send and receive messages as you wish. Built to support Interactive Messaging, this handset is uniquely equipped to communicate with a comprehensive range of external sources, including building management systems, hospital systems and production process systems.

With the i75 in your hand, you've got a remote control to a specific machine, a door opener or, if you connect it to a work assignment database, on-the-spot instructions for you or your colleagues.

Presence Management for increased productivity

With the unique integration to presence management systems, you will never be left with unanswered calls, or have calls redirected to voicemail, without giving the caller information of your availability.

Push-to-talk instant group communications

The push-to-talk functionality makes it possible to instantly connect a group to a conference session by a single key press. The group members are automatically contacted and connected which allows the complete group to respond quickly and efficiently in critical situations.

PRODUCT SHEET: ASCOM i75 PROTECTOR

Features	
Virtual SIM	Personal settings stored on a central server

- Headset with microphone on boom
- Headset with hearing protection
- Security string

Always connected with power-save

By utilizing the latest standardized power-save technologies, the phone will conserve battery in order to remain in use without the constant need to be recharged.

Virtual SIM. Unreal benefits

Lost your i75? No problem. Thanks to the Virtual SIM, you'll be on call with another 'system-associated' handset in no time. All you need to do is carry out a simple procedure in order to transfer your own settings – volume, menu, local phonebook, alarm settings – from a central server. Furthermore, multiple charging options, including a desktop charger, charging rack and battery charging rack, keeps your handset going at all times. Perfect for saving time and maintaining productivity.

Location – a solution for enhanced personal safety

The Ascom/Ekahau secure tracking solution offers the ability to locate things or people over any generation of WiFi networks.

The solution aims to provide location-based services as well as personal security with the option to send alarms, manually by push-button or automatically by the use of built-in no-movement and man-down sensors. The position of the person carrying the handset can be estimated with pinpoint accuracy and rapid assistance can be sent.

The location possibilities also enable finding the closest assets and the ability to locate key personnel for workflow optimizations.
